

Installation Kits and Optional Services

RASIRC offers a variety of accessories and services related to the RASIRC Steamer.

Steamer Installation Kit 200-240VAC

The Steamer Installation Kit is a convenient package of materials required to connect the Steamer to your equipment. Included in the Kit are heater tape, high purity PFA tubing, elbows, connector tape and a 3-way valve.

Water Installation Kit

The Water Installation Kit is a convenient package of materials required to connect the Steamer to your DI water supply. Included in the Kit are a PFA regulator, filter, stainless steel gauge, and PFA tubing.

Steamer Delivery Kit

The Steamer Delivery Kit is a convenient package of materials required to connect the Steamer to your tool. Included in the Kit are a 3-way diaphragm, heater tape, PFA tubing, and insulation

External Line Heater Kit

The External Line Heater Kit provides separate delivery line control independent of Steamer control. Included in the Kit are an external line heater and thermal insulation.

OnSite Installation Service (optional)

RASIRC will provide an expert service engineer to install the Steamer in your environment. The engineer will work with your team to ensure all connections comply with your standards and will run a series of tests to confirm that the unit is operating properly in your environment.

About RASIRC

RASIRC develops products that purify and deliver ultra pure liquids and gases, with a primary focus on water vapor. RASIRC dryers, humidifiers, and steam generators are of critical importance for many applications in the semiconductor, pharmaceutical, medical, biological, fuel cell, and power industries. Custom systems are available upon request.
